Re: Lead in Water Testing

West Canada Valley Central School District conducted required testing of all the water outlets currently or potentially used for drinking or cooking purposes in its buildings located at 5447 State Route 28, Newport, NY for analysis by a New York State ELAP-certified laboratory.

We have remediated the problem areas by temporarily posting signage that alerts students and staff to avoid drinking the water from these sinks or temporarily taking them out of service. Our maintenance department will be taking steps to correct the affected areas. Once these areas have been corrected, re-testing will then take place.

All outlets that are to be kept in service will be resampled with first draw samples and not brought back online until they are shown to be below the Action Level, according to a report from a New York State ELAP-certified laboratory.
